Theatrixx xPressCue Media Player

When it comes to media playback, most professional solutions available today are either laptop-based, or media-server based. This often comes with a slew of reliability issues and a steep learning curve. The Theatrixx xPressCue is a hardware device designed to address your playback needs.

The xPressCue can be controlled in several ways, including its on-board OLED display and encoder wheel, web-based interface, DMX and more. External devices such as the Elgato Stream Deck XL are supported natively, giving 32 immediate access buttons for clips, cue lists, and playback controls.

- ▶ Similar role and capabilities to Playback Pro, but on dedicated hardware, without dongles and adapters
- ▶ Side-car laptop recommended but not required for set-up and use/monitoring
- ▶ Web-based controls from any laptop or even an iPad, additional web user may view "Presenter view" with current/next clips
- ▶ Stream Deck XL included - 32 buttons assignable for clips, cues, playlist and transport controls
