

PerfectCue® Micro

Remote Presentation Controller

PerfectCue Micro is programmable!

Visit www.dsan.com/PerfectCue to download programmer application.

Introduction

PerfectCue Micro is a compact receiver and USB device used to remotely control presentation apps such as PowerPoint® with a hand-held transmitter. The connected computer "sees" PC-Micro as a standard Human Interface Device (HID). Hence, no special drivers are needed for communication. The actual keystrokes delivered are stored in the receiver. If necessary, they can be changed using a free programming app.* By default, the keystrokes are "right arrow," "left arrow" and "b." These correspond to the green, red and yellow LEDs or the "Forward," "Back" and "Screen Blank***" buttons on the transmitter.

*Download at www.dsan.com/PerfectCue.

**Button may not be available with supplied transmitter.

Transmitters

SUPPLIED: PC-AS2*

POWER:

2 "coin"cells* CR2032

1 "barrel cell" CR123A

(Laser models only)

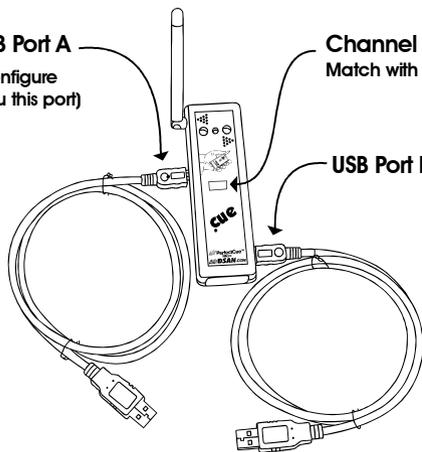

*Default transmitter. Other models available:
