

Perfect In-camera Performance

Black Pearl BP2 is specially developed for use in the film industry and xR applications. Featuring in large-scale film projects, such as The Mandalorian and Westworld, its features have been adapted based on extensive testing and industry partners' feedback.

Creating the right canvas for virtual production is not just building any LED screen. It's where the LED panel, processing, and camera work together, complement and strengthen each other that real stunning results are achieved. ROE Visual Black Pearl has proven to be the right product for the job.

The BP2 V2 offers the trusted performance of the BP2 in an updated version with high-speed components. It results in an identical perfect in-camera performance as the BP2, adding quicker and easier camera set up and handling.

Superb Visuals and Perfect In-camera Behaviour

True-to-content effects are created with high refresh rates, outstanding color processing and great contrast ratios.

ROE Visual LED screens work with high-end components and state of the art driver IC's; making all the difference for the in-camera performance.

Fast and Easy Set-up

The integrated magnet-assisted assembly, LED protection and smart lock system allow for automatic positioning and efficient installation. These features guarantee optimum panel protection during build and break.

High refresh rates help to avoid visible scan-lines.

BP2 series has a refresh rate up to 7680Hz.

With a bit-depth of 16-bit, color banding and inaccurate color representation are a problem of the past.

BP2 series offers low refresh cycles due to a low scan rate.
