ASSEMBLY INSTRUCTIONS

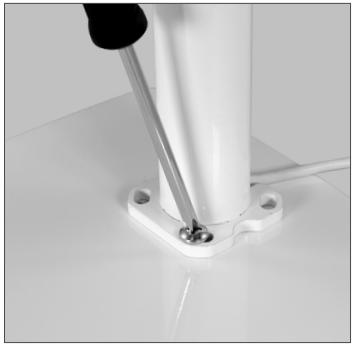

1. Cable routing. Choose your method of how you thread your charge cable that came with your kiosk:

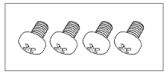

A: Exit out the back of the foot cover (either with base, or securely mounted to substrate—see page 5).

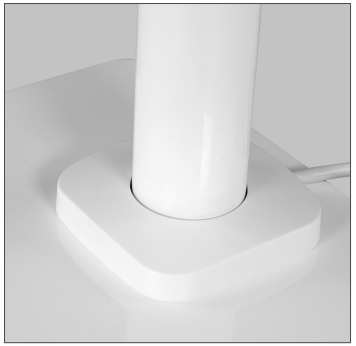

B: Exit through the compact base or substrate (no wire showing). This will require cable routing through your substrate–see page 5.

2. Attach Compact Base. Line up the bottom of the mount pole with the four (4) screw holes in the compact base. Attach using the **four (4) Compact Base Screws.**

NOTE: You will need to hold the foot cover up and out of your way while bolting. If not using the compact base, attach to surface using template on page 5, and thread the cable through your substrate.

3. Foot Cover. Slide the foot cover down the pole to cover the screws. Velcro will hold it in place once positioned.

4. Place your Head Unit onto the MagDOCK mount in either landscape or portrait orientation. **Turn the key** to lock it in place.

WARNING: Not locking the MagDOCK will result in the unit falling off, possibly damaging the unit and/or the tablet. The Lilitab Pro is designed to be operated with the lock closed.

Refer to your Lilitab Head Unit owner's manual for tablet installation instructions.
